

## POPULATION : INDIANA

## COMPOSITION AND CHARACTERISTICS OF THE POPULATION

Prepared under the supervision of WM. C. HUNT, Chief Statistician for Population

The first population bulletin for Indiana gave the number of inhabitants by counties and minor civil divisions, the decennial increase and density of population, and the proportion urban and rural. The present bulletin deals with the composition and characteristics of the population. The two bulletins cover all the principal topics of the population census except occupations and ownership of homes.

**Description of the tables.**—The greater part of the bulletin consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for cities of 25,000 inhabitants or more; Table III for cities of 10,000 to 25,000; Table IV for places of 2,500 to 10,000; and Table V for wards of cities of 50,000 or more.

A series of summary tables reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since it is well known that nearly all negroes and Indians are native born of native parentage, and that nearly all Chinese and Japanese are either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents native of the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being treated as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had at-

tended any kind of school at any time from September 1, 1909, to the date of enumeration, April 15, 1910.

The Census Bureau treats as illiterate any person unable to write, regardless of his ability to read; the returns relate only to persons 10 years of age or over.

**Color and nativity** (Table 1).—Of the total population of Indiana, 2,130,088, or 78.9 per cent, are native whites of native parentage; 350,551, or 13 per cent, are native whites of foreign or mixed parentage; 159,322, or 5.9 per cent, are foreign-born whites; and 60,320, or 2.2 per cent, are negroes. The corresponding percentages in 1900 were 77.6, 14.5, 5.6, and 2.3, respectively, the comparison indicating a slight increase in the relative importance of the native whites of native parentage. In most of the counties, the proportion of whites of foreign birth or of foreign or mixed parentage is small. There is, however, one county (Lake) in which the foreign-born whites constitute more than one-fourth of the total population, and six counties in which the native whites of foreign or mixed parentage exceed that proportion. (See maps, p. 37.)

Of the urban population, 67.8 per cent are native whites of native parentage; of the rural population, 87 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 18.2 and 9.1 per cent, respectively. The percentage of foreign-born whites is 9.7 in the urban population and 3.1 in the rural; the percentage of negroes is 4.2 in the urban and 0.8 in the rural.

**Sex** (Table 2).—In the total population of the state there are 1,383,295 males and 1,317,581 females, or 105 males to each 100 females. In 1900 the ratio was 104.4 to 100. Among native whites the ratio is 102.3; among foreign-born whites 156.4. In the total urban population there are 102.5 males to 100 females, as compared with 106.8 in the rural population.

**State of birth** (Tables 3 and 4).—Of the total native population, that is, population born in the United States, 79.9 per cent were born in Indiana and 20.1 per cent in other states; of the native white population, 19.1 per cent were born in other states, and of the native negro, 58.1 per cent. Persons born outside the state constitute a much larger proportion of the native population in urban than in rural communities.

**Foreign nationalities** (Tables 5 and 12).—Of the foreign-born white population of Indiana, persons born in Germany represent 39 per cent; Hungary, 9; Austria, 7.4; Ireland, 7.1; England, 6.1; Russia, 6; Italy, 4.3; Canada, 3.6; Sweden, 3.2; Scotland, 2.1; all other countries, 11.8. Of the total white stock of foreign

origin, which includes persons born abroad and also natives having one or both parents born abroad, Germany contributed 51.8 per cent; Ireland, 10.4; England, 6.8; Hungary, 3.7; Austria, 3.5; Canada, 3.3; Russia, 2.9; Sweden, 2.3; Scotland, 2.1; Switzerland, 2; France, 1.8; Italy, 1.8.

**Voting and militia ages** (Table 6).—The total number of males 21 years of age and over is 822,434, representing 30.5 per cent of the population. Of such males, 72.5 per cent are native whites of native parentage, 14.2 per cent native whites of foreign or mixed parentage, 10.8 per cent foreign-born whites, and 2.5 per cent negroes. Of the 88,927 foreign-born white males of voting age, 42,533, or 47.8 per cent, are naturalized.

**Age** (Tables 7, 8, and 13).—Of the total population, 10.2 per cent are under 5 years of age, 19.3 per cent are from 5 to 14 years, inclusive, 18.9 per cent are from 15 to 24, 28.9 per cent are from 25 to 44, and 22.5 per cent are 45 years of age and over. The foreign-born white population comprises comparatively few children, only 4 per cent of this class being under 15 years of age, while more than four-fifths (84 per cent) are 25 years of age and over. Of the native whites of foreign or mixed parentage, less than three-fifths (59.7 per cent) are 25 and over and of the native whites of native parentage less than one-half (47.6 per cent).

The urban population shows a smaller proportion of children than the rural and a larger proportion of persons in the prime of life. Migration to the city explains this at least in part. Of the urban population, 33 per cent are from 25 to 44 years of age, inclusive, and of the rural population, 26 per cent.

**School attendance** (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 777,889, of whom 513,623, or 66 per cent, attended school. In addition to these, 5,390 persons under 6 and 10,729 of 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage of school attendance was 65.9, as compared with 66.2 for girls. For children from 6 to 14 years, inclusive, the percentage attending school was 88.2. The percentage for children of this age was highest among native whites of native parentage, 88.4, followed by negroes, 87.7; native whites of foreign or mixed parentage, 87.6; and foreign-born whites, 80.6. (See Table I, p. 9.) There is little difference between urban and rural communities as regards the percentage of school attendance for the ages from 6 to 14, but of persons from 15 to 20 years, inclusive, 26.6 per cent were reported as attending school in urban communities as against 37.1 per cent in rural.

**Illiteracy** (Table 10).—There are 66,213 illiterates in the state, representing 3.1 per cent of the total population 10 years of age and over, as compared with 4.6 per cent in 1900. The percentage of illiteracy is 11.7 among foreign-born whites, 2.1 among native whites, and 13.7 among negroes.

For all classes combined, the percentage of illiterates is about the same in urban communities as in rural communities, 3 and 3.1, respectively, but the percentages for native whites and for negroes are higher in rural communities than in urban communities, while the percentage for foreign-born whites is slightly lower.

For persons from 10 to 20 years, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is very slight, only 0.6. (See Table I, p. 9.)

**Marital condition** (Tables 11 and 14).—In the population 15 years of age and over 34 per cent of the males are single and 26.2 per cent of the females. The percentage married is 59.8 for males and 62.3 for females; and the percentage widowed 5.1 and 10.4, respectively. The percentages divorced, 0.8 and 0.9, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due largely to the fact that they marry younger. Thus 11.4 per cent of the females from 15 to 19 years of age are married, as compared with 1.2 per cent of the males, and 52.2 per cent of the females from 20 to 24 years are married, as compared with 27.2 per cent of the males. In the next age group, 25 to 34 years, the difference is not so great, 77.8 for females as against 67.7 for males, while in the age group 35 to 44 the difference practically disappears. That there is a larger proportion of widows than of widowers probably indicates that men are more apt to remarry than women and furthermore that, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of persons over 15 years of age who are married are as follows: Foreign-born whites, 63.9 for males and 66.9 for females; native whites of native parentage, 59.6 and 62.7, respectively; native whites of foreign or mixed parentage, 59 and 59.1, respectively; negroes, 51.7 for males and 55.9 for females.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that the comparison should be made by age periods since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married, both for males and females, is higher in rural than in urban communities.

**Dwellings and families.**—The total number of dwellings in Indiana is 631,554, and the total number of families 654,891, indicating that in very few cases does more than one family occupy a dwelling. (See Table I, p. 9.) The average number of persons per dwelling is 4.3, and the average number per family 4.1.
